

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (currently amended) A system that enables [the] a recording of user-viewable visual stimuli comprising:

21 a processing platform for: executing code capable of recording a user-viewable visual stimuli; [and] verifying a change in the visual stimuli; and creating a visual event related to the change in the visual stimuli; and

a storage platform for storing at least the [one] user-viewed visual stimuli, the storage platform coupled to the processing platform.

2. (original) The system of claim 1 further comprising a user interaction device coupled to the processing platform.

3. (original) The system of claim 1 wherein the processing platform executes code capable of recording a user-viewable stimuli, by:

detecting a visual event;

verifying that the visual event involves a parameter that changes a viewable stimuli; and

recording at least one parameter.

4. (original) The system of claim 1 further comprising a browser coupled to the processing platform.

5. (currently amended) The system of claim 1 further comprising a browser interface coupled to the processing platform [server].

6. (original) The system of claim 1 further comprising a network coupled to the processing platform.

07 7. (currently amended) The system of claim 1 wherein the storage platform comprises [cached] cached memory.

8. (original) The system of claim 1 wherein the system is maintained in a Person Digital Assistant (PDA).

9. (original) The system of claim 6 wherein the network is the internet.

10. (original) The system of claim 6 further comprising a host computer coupled to the network, the host computer for communicating with the processing platform.

11. (original) The system of claim 1 further comprising an eye-tracking device coupled to the processing platform.

12. (original) The system of claim 11 wherein the eye-tracking device is enabled to monitor pupil dilation.

13. [A data signal comprising a data structure capable of recording a user-viewable stimuli, by:

detecting a visual event;

verifying that the visual event involves a parameter that changes a viewable stimuli; and  
recording at least one parameter.]

A system that enables a recording of user-viewable visual stimuli comprising:

07 a processing platform for: executing code capable of recording a user-viewable visual stimuli; verifying a change in the visual stimuli; verifying a change in a user's eye position; and creating a visual event related to the change in the visual stimuli and to the change in the user's eye position; and

a storage platform for storing at least the user-viewed visual stimuli, the storage platform coupled to the processing platform.

14. (currently amended) The data signal of claim 13 further comprising a [code segment capable of the] parameter related to the visual event, wherein the parameter is a network address of all online content immediately displayed within a browser window.

15. (currently amended) The data signal of claim 13 further comprising a [code segment capable of the] parameter related to the visual event, wherein the parameter is a two-dimensional offset of the online content as it is displayed within a browser window.

16. (canceled)

17. (canceled)

18. (new) The system of claim 1, wherein the change is caused by a user.

19. (new) The system of claim 1, wherein the change is caused by a source of the visual stimuli.

20. (new) The system of claim 1, wherein the change is caused by the processing platform.

21. (new) A computer readable medium comprising instructions for:

- correlating an eye position with displayed visual stimuli;
- verifying a change in the displayed visual stimuli;
- verifying a change in the eye position based on the change in the displayed visual stimuli;

and

recording the change in the displayed visual stimuli and the change in the eye position.
